Experience

Master's thesis, *Autonomous Bus Passenger Experience*, Scania CV AB, Styling & Ergonomics - Driver Vehicle Interaction Group, Södertälje – November 2017 - April 2018

The aim with my thesis is to create an user experience of an automated bus that is perceived as pleasurable and efficient. This is to be achieved through an user centered 1 design approach with emphasis on the user and user research. Along the way I have conducted pure field observations and observations with contextual interviews, semi-structured interviews and questionnaires as well as netnography. One of many hard and tricky parts along the way is to get the users to think about how they might perceive this coming future and the possibilities it might bring.
Along with a in depth user research I have had workshops on the Scania's design department as well as expert interviews.
The deliverables is an evaluated concept and a framework of challenges, needs and interactions between the passenger and the autonomous bus.

Interaction design and user research intern, Scania CV AB, Styling & Ergonomics - Driver Vehicle Interaction Group, Södertälje – summer 2017

At Scania I contributed to the design of the pre-study regarding the ADAS&ME project, the work consisted of planning and performing the pre-study and how the drivers was going to be tested. I took part in analyzing the data as well as performing the tests and some interviews. Another task was to create interior concepts for future truck in-cabin work places. The tempo during the study was high, I had to be prepared to solve any problem that came up quickly and mostly alone because of the time of the tests, they were conducted during summer vacation when the major part of the group were on vacation.

Salesman, Stadium AB, Umeå – 2012 - fall 2017

At Stadium I work extra during weekends as a salesman and when I have time over from my school work. Here I take care of the customers and try to meet their needs. I mainly sell running shoes and skis, as this is sports I have own experience from. At work I think the meeting with the customer is the most fun and interesting part, as this means that I have to be responsive and see what is really demanded in the individual case.

Tutor, FabLab, Sliperiet at Umeå Universitet, Umeå – 2014 - fall 2017

At Sliperiet I helped public and students with projects, prototyping and I also gave them feedback on projects they bring if they wanted support. At Sliperiet we provide machines and *new technology* that are usually too expensive or bulky to have at home. There are 3D printers, laser cutters, CNC mills, table saws, sewing machines, weaving machines, Arduino electronics labs, analog tools and workspaces that are open for the public to use. The workplace is international and very dynamic, you never know what's going to happen when you go to work. The work includes providing advice and tips for projects ranging from county art, automated irrigation systems and book printing. This is also the first FabLab in Sweden, which I've been a part of ever since the beginning.
As a part of this we have been traveling around schools and companies to show the possibilities with the new tech, due to this I have to be updated and keen on my tasks and handling the machines and teaching their capabilities.

Event manager, Pepp!, Umeå – academical year 2015 - 2016

At *Pepp!* we worked to make technical education more popular among women who was studying their last year at high school and who were just about to apply for university or college. As event manager at the non-profit organization *Pepp!* In Umeå, I was responsible for the events that were going to be carried out during the academic year. Among the task was arranging places to be, lecturers and food. First and foremost me and my colleague planned what the events would be about and what activities we were going to do.

Project leader, Design-Build-Test, Umeå University, Umeå – semester 2, 2016

During this course I worked together with four other students with a company as a client. I contacted Teenage Engineering(TE) to find out if it was possible to do a project with them. This led us to develop an application for Apple Watch to control their OD-11 speaker.
My task was to be a project manager, where I planned meetings, kept contact with Teenage Engineering and planned goals for each week which we decided together with

TE. The project was demanding and pushed the cooperation within the group forward. The project succeeded and TE was pleased with the application. I also worked with user tests, interface design, prototype development and programming.

Substitute teacher, Kompetensnätverket, Umeå – academical year 2014-2015

At *Kompetensnätverket* I worked as a teacher in Umeå municipality at different schools and with different classes each time. This was fun and at the same time a big challenge, especially to try to get into a new context and understand what kind of teaching approach that would work best on different combinations of students.

Maintenance work, Moelven Dalaträ AB, Mockfjärd – summer 2015 & 2016

At the sawmill Moelven Dalaträ, I worked to get the industrial railway in order to resume transport by rail. In addition to this I worked with general industrial maintenance as well. At the same time I had to lead a group of younger summer workers at Moelven to give them assignments and monitor their results.

Education

Umeå Universitet, Umeå

Master of Science in Interaction and Design, 300 ECTS, 2013 - ongoing

Example of courses:

Ubiquitous Computing, Artificial Intelligence, Industrial and Interaction design, Psychology Architecture for Interaction and Design, Current Development in Interaction and Design.

School of Art, Design and Media - Nanyang Technological University, Singapore

Modules within Industrial- and Interaction Design, 2016

Example of courses:

Interactive Devices, User Experience in Design, Programming for Art and Games, Design Thinking.

School of Business and Economics at Umeå Universitet, Umeå

Economics, 60 ECTS, 2012 – 2013

Falu Frigymnasium, High School, Falun

Natural Science Program , 2006 – 2009

Skills

Computer design tools (experience: min • - max • • • •)

Photoshop	• • • •
Illustrator	• • • •
InDesign	• • •
Adobe Xd	• • •
Sketch	• • •
Premiere Pro	• • •
Rhinoceros 3D	• • •
After Effects	• •
Autodesk Maya	• •

Programming

Processing	• • •
Arduino	• • •
HTML	• • •
CSS	• • •
JavaScript	• •
Java	•

Design methods / tools

User research	• • • •
User mapping	• • • •

Fast prototyping ● ● ●

Laser cutter / 3D printing ● ● ●

Sketching ● ● ●

Misc.

Drivers license and certificate for hot work.
